IEEE Transactions on Signal and Information Processing over Networks

Special Issue on Distributed Information Processing in Social Networks

Over the past few decades, online social networks such as *Facebook* and *Twitter* have significantly changed the way people communicate and share information with each other. The opinion and behavior of each individual are heavily influenced through interacting with others. These local interactions lead to many interesting collective phenomena such as herding, consensus, and rumor spreading. At the same time, there is always the danger of mob mentality of following crowds, celebrities, or gurus who might provide misleading or even malicious information. Many efforts have been devoted to investigating the collective behavior in the context of various network topologies and the robustness of social networks in the presence of malicious threats. On the other hand, activities in social networks (clicks, searches, transactions, posts, and tweets) generate a massive amount of decentralized data, which is not only big in size but also complex in terms of its structure. Processing these data requires significant advances in accurate mathematical modeling and computationally efficient algorithm design.

Many modern technological systems such as wireless sensor and robot networks are virtually the same as social networks in the sense that the nodes in both networks carry disparate information and communicate with constraints. Thus, investigating social networks will bring insightful principles on the system and algorithmic designs of many engineering networks. An example of such is the implementation of consensus algorithms for coordination and control in robot networks. Additionally, more and more research projects nowadays are data-driven. Social networks are natural sources of massive and diverse big data, which present unique opportunities and challenges to further develop theoretical data processing toolsets and investigate novel applications. This special issue aims to focus on addressing distributed information (signal, data, etc.) processing problems in social networks and also invites submissions from all other related disciplines to present comprehensive and diverse perspectives.

Topics of interest include, but are not limited to:

- Dynamic social networks: time varying network topology, edge weights, etc.
- Social learning, distributed decision-making, estimation, and filtering
- Consensus and coordination in multi-agent networks
- Modeling and inference for information diffusion and rumor spreading
- Multi-layered social networks where social interactions take place at different scales or modalities
- Resource allocation, optimization, and control in multi-agent networks
- Modeling and strategic considerations for malicious behavior in networks
- Social media computing and networking
- Data mining, machine learning, and statistical inference frameworks and algorithms for handling big data from social networks
- Data-driven applications: attribution models for marketing and advertising, trend prediction, recommendation systems, crowdsourcing, etc.
- Other topics associated with social networks: graphical modeling, trust, privacy, engineering applications, etc.

Important Dates:

- Manuscript submission due: September 15, 2016
- First review completed: November 1, 2016
- Revised manuscript due: December 15, 2016
- Second review completed: February 1, 2017
- Final manuscript due: March 15, 2017
- Publication: June 1, 2017

Guest Editors:

- Zhenliang Zhang, Qualcomm Corporate R&D (zhenlian@qti.qualcomm.com)
- Wee Peng Tay, Nanyang Technological University (wptay@ntu.edu.sg)
- Moez Draief, Imperial College London (m.draief@imperial.ac.uk)
- Xiaodong Wang, Columbia University (xw2008@columbia.edu)
- Edwin K. P. Chong, Colorado State University (edwin.chong@colostate.edu)
- Alfred O. Hero III, University of Michigan (hero@eecs.umich.edu)
