

CALL FOR PAPERS

IEEE Transactions on Multimedia

Special Issue on Multimodal Affective Interaction

Schedule:

Submission deadline: **December 1, 2009**
Notification of acceptance: June 8, 2010
Final manuscript due: **June 22, 2010**
Tentative publication date: October 2010

Guest Editors:

Nicu Sebe, Univ of Trento, Italy
Hamid Aghajan, Stanford University, USA
Thomas Huang, Univ of Illinois at Urbana-Champaign,
Nadia Magnenat-Thalmann, Univ of Geneva, Switzerland
Caifeng Shan, Philips Research, The Netherlands

Affect sensing and recognition from multiple modalities and cues has attracted much attention recently, with important applications in human-computer interaction. However, this research area is still in its infancy and it is an under-explored field. There are many challenges faced when moving to multimodal affective interaction. For example, how to acquire and annotate affect data using multiple sensors or modalities, especially the spontaneous data in natural settings; how to effectively extract and select representative features from different modalities for affect recognition; how to synchronize data or features from different modalities; how to select the fusion strategy of multimodal affect data for a given application, etc. It is also necessary to investigate which modalities and cues are the most suitable for which application context. To address these challenges, we have to adapt the existing approaches or find new techniques suitable for multimodal affective interaction.

This special issue seeks to present and highlight the latest developments on multimodal affective interaction. Submissions that address real-world applications are especially encouraged.

Topics of interest include, but are not limited to,

- Multimodal affective data fusion (including the user feedback)
- Feature extraction from affective data
- Recognition & synthesis of affective body language
 - facial expressions
 - bodily expressions
 - gesture recognition
- Affective speech recognition & synthesis
- Personal emotion profile creation
- Spontaneous affect analysis
- Affective sound and music processing
- Design of affective interaction systems
- Affective loop in social robots/agents
- Affective user behavior/lifestyle modeling
- Evaluation of affective interaction systems
- Real-time applications of multimodal affective interaction (smart environments, entertainment, virtual reality, affective wearables, education, recommendation systems, etc)

Submission Procedure:

Authors should prepare manuscripts exactly as stated in the Information for Authors as published at http://www.ieee.org/organizations/society/tmm/author_info.html. Mandatory overlength page charges and color charges will apply. Manuscripts (both 1-column and 2-column versions are required) should be submitted electronically through the online IEEE manuscript submission system at <http://tmmieee.manuscriptcentral.com/>. When selecting a manuscript type, authors must click on Special Issue on Multimodal Affective Interaction. A completed copyright form is **required** to be completed, signed and faxed to 1-732-562-8905 at the time of submission, indicating the manuscript number on the top of the page.
